Solution are:

```
package app.API.Python.Script.Runner;
import app.API.Custom.Logger.Java.Logger;
import app.API.System.Call.CMD.Command;
import java.io.IOException;

public class Python_System_Check {
    public static boolean Python_Check() throws IOException {
        String output=Command.CMD_COMMAND("python --version") ;
        if(output.contains("Python 3")) {
            Logger.INFO("Python is found ","log.txt");

        }
        else if(output.contains("is not recognized as")) {
            Logger.ERROR("Python is not found ","log.txt");
            JOptionPane.showMessageDialog(null,"Please Install a Python 3 is required for run modules");
        }
    }
}
```
